eyePIX Handheld Iridology Camera

The **eyePIX Handheld** iris/sclera camera is the newest addition to the superior product line of iris imaging systems available through Dr. David J. Pesek.

This camera was designed to be economical while maintaining a high standard of image quality.

The advantage of the **eyePIX Handheld** model over other cameras in this class is the superior flash lighting system. This allows for true color images with the correct exposure. Further, the lateral / medial lighting capability is the best for iris photography.

Couple the lighting system with a high quality 10 megapixel SLR camera and a special lens and you are sure to capture high resolution iris photos.

The **eyePIX Handheld** is compact, lightweight, and thus, very portable. It can also be used for photographing the eyes of animals, young children and those people who are not ambulatory.

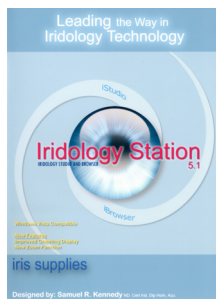

Features:

- Specially Designed Lens for Iris/Sclera Photography
- Superior Flash Lighting System for True Color Images
- Lateral, Medial and Twin Lighting Options
- Small & Lightweight
- 10 Megapixel SLR Camera
- Easy to Use
- The eyePIX Handheld does not have the lesser quality LED lighting of other systems that distorts color and image quality and limits depth of field.

Call for Current Pricing:
1-888-573-EYES (3937) or 1-828-926-6100
